Update trustmnw-cli to 1.2.1 on Ubuntu

Trust.Supply masternode validator · **Version 2.1, 18 November 2026** · trustmnw-cli 1.2.1 requires **Node 26**

> Update **one validator at a time**. Log in to your VPS over SSH as the user that runs the validator (not root). Don't use `sudo`.

1. Check and back up

```
which node
trustmnw-cli --version
```

Expected: a path under `~/.nvm`. Write the CLI version down.

Take a **snapshot** of the VPS in your provider's panel.

2. Log out and stop

```
trustmnw-cli logout && trustmnw-cli stop
```

3. Install Node 26

```
nvm install 26
nvm alias default 26
node -v
```

Expected: v26.x

4. Install trustmnw-cli 1.2.1

```
npm install -g @morpheusnetwork/trustmnw-cli@1.2.1 --loglevel verbose
```

Lines keep scrolling while it works. Wait until you get your prompt back. Don't press Enter or Ctrl+C.

```
trustmnw-cli --version
```

Expected: 1.2.1

5. Log in and check

```
trustmnw-cli login
trustmnw-cli status
```

Log in with your KYC email and the code you receive. `login` also starts the node. Expected: node connected.

Moving to another server/VPS? Run `trustmnw-cli logout && trustmnw-cli stop` on the old one just before you run `trustmnw-cli login` on the new one. Never run the same validator on two machines at once.

On trust.supply the node should show online. Then move on to the next validator.

> **Don't** accept npm's offer to upgrade npm, and don't use `npm update`.

To go back to the old version

Your old CLI is still installed under Node 20.9.0. Switch back to it:

```
trustmnw-cli logout && trustmnw-cli stop
nvm alias default 20.9.0
```

Open a new SSH session, then:

```
trustmnw-cli login
trustmnw-cli status
```

If you reinstall the CLI on Node 20 and npm says ENOTEMPTY, first run: `rm -rf ~/.nvm/versions/node/v20.9.0/lib/node_modules/@morpheusnetwork/.trustmnw-cli-*`

Based on the Masternodes Setup Guide v2.3 by @trippledutch and tests of 17–18 Nov 2026 · Version 2.1 (18 Nov 2026): logout and stop before the install, login after it (fixes "disconnected / API request failed" on a staked validator) · v2.0: 1.2.1 on Node 26 · v1.5: 1.1.1 on Node 20
