Update trustmnw-cli to 1.2.1 on macOS

Trust.Supply masternode validator · **Version 2.1, 18 November 2026** · trustmnw-cli 1.2.1 requires **Node 26**

> Update **one validator at a time**. Open **Terminal**. Don't use `sudo` for brew, npm or trustmnw-cli.

Tested on a Mac with Homebrew Node 26, 18 Nov 2026. The nvm route follows the steps tested on Ubuntu.

1. Check and back up

```
which node
trustmnw-cli --version
```

Expected: a path under `~/.nvm` or `/opt/homebrew` (Homebrew). Write the CLI version down.

Make a backup if you can (e.g. Time Machine).

2. Log out and stop

```
trustmnw-cli logout && trustmnw-cli stop
```

3. Check Node, install Node 26 if needed

```
node -v
```

Shows v26 or higher? Skip to step 4. Only install Node 26 if it is older or missing.

Node from nvm (`~/.nvm`):

```
nvm install 26
nvm alias default 26
```

Node from Homebrew (`/opt/homebrew`):

```
brew update && brew upgrade node
```

Then check `node -v`: expected v26.x.

4. Install trustmnw-cli 1.2.1

```
npm install -g @morpheusnetwork/trustmnw-cli@1.2.1 --loglevel verbose
```

Lines keep scrolling while it works. Wait until you get your prompt back. Don't press Enter or Ctrl+C.

```
rehash
trustmnw-cli --version
```

Expected: 1.2.1 (`rehash` makes zsh forget the old CLI location). Still an old version? Run `which -a trustmnw-cli`: if it lists `/usr/local/bin/trustmnw-cli`, remove that old copy with `rm /usr/local/bin/trustmnw-cli` (add `sudo` if permission is denied), then `rehash` again.

5. Log in and check

```
trustmnw-cli login
trustmnw-cli status
```

Log in with your KYC email and the code you receive. `login` also starts the node. Expected: node connected.

Moving to another server? Run `trustmnw-cli logout && trustmnw-cli stop` on the old one just before you run `trustmnw-cli login` on the new one. Never run the same validator on two machines at once.

On trust.supply the node should show online. Then move on to the next validator.

Keep it running

The validator runs in the background, so you can close Terminal. Check it any time with `trustmnw-cli status` in a new Terminal window. The Mac must not sleep: **System Settings → Energy** (laptops: **Battery → Options**) → turn on **"Prevent automatic sleeping when the display is off"**, and keep a laptop's lid open. After a restart of the Mac, run `trustmnw-cli login` again.

> **Don't** accept npm's offer to upgrade npm, and don't use `npm update`.

To go back to the old version

If you installed Node 26 with nvm, your old CLI is still installed under Node 20.9.0. Switch back to it:

```
trustmnw-cli logout && trustmnw-cli stop
nvm alias default 20.9.0
```

Open a new Terminal window, then:

```
trustmnw-cli login
trustmnw-cli status
```

Homebrew Node: log out and stop, run `npm install -g @morpheusnetwork/trustmnw-cli@<old version> --loglevel verbose`, then log in.

If you reinstall the CLI on Node 20 and npm says ENOTEMPTY, first run: `rm -rf ~/.nvm/versions/node/v20.9.0/lib/node_modules/@morpheusnetwork/.trustmnw-cli-*`

Based on the Masternodes Setup Guide v2.3 by @trippledutch and tests of 17–18 Nov 2026 · Version 2.1 (18 Nov 2026): Node 26 only installed if missing or older; logout and stop before the install, login after it (fixes "disconnected / API request failed" on a staked validator) · v2.0: 1.2.1 on Node 26 · v1.5: 1.1.1 on Node 20
